

Velkan

Fullstack & Blockchain Engineer

✉ velikanghost@yahoo.com 🌐 <https://velkan.xyz>

Summary

Versatile Software Engineer with extensive experience building production-ready decentralized applications (dApps), high-performance backends, and immersive 3D interfaces. Passionate about architecting scalable systems and seamless user experiences across the Web3 and Web2 landscape. Proven track record of delivering end-to-end solutions, from secure smart contracts to complex, state-managed frontends.

Experience

Firespot

Lead Developer

March 2025 - Present

- Architected and implemented a comprehensive QR-based payment ecosystem with dual-platform.
- Firespot Lite: Developed an instant transfer landing page, admin portal, and scalable REST API for lightweight bank settlements and QR kit activation.
- Firespot Pro: Built professional Customer and Merchant frontends using Next.js, Redux Toolkit, and Mantine, leveraging RTK Query for efficient data fetching.
- Integrated Paystack for automated bank account validation, subaccount creation, and high-volume payouts.
- Implemented secure OTP-based authentication via Termii and email notifications using Resend.

Monshape

Fullstack Web3 Developer

April 2025 - December 2025

- Independently built a full-stack campaign platform using Next.js, supporting over 3,000 users completing verifiable on-chain and off-chain tasks (Twitter/Discord engagement, DeFi interactions, etc.).
- Implemented automated point-distribution logic based on NFT holdings and integrated SBT (soul-bound token) minting upon successful task completion.
- Developed all smart contracts in Solidity and built a secure, scalable backend with NestJS to manage task verification, user state, and blockchain interactions.
- Developed a wallet checker website using Next.js, Wagmi and Google sheets

MYITURA HEALTH

Frontend Engineer

January 2023 - March 2025

- Developed Myltura website using Vite and MobX for global state management.
- Built various dashboards tailored for different users:
 - Doctor dashboard for managing appointments and consultations.
 - User dashboard for accessing health services and managing profiles.
 - Laboratory dashboard for test management and result processing.
- Implemented an appointment booking process for scheduling video call consultations.
- Enabled purchase and payment functionality for services and items, integrated with Paystack for secure transactions.

<https://myitura.com>

MICH CONSULTING SERVICES

Fullstack Engineer

July 2021 - February 2022

- Developed Mich Consulting Services website front-end using Next.js, Tailwind CSS for styling, and MobX for state management.
- Built the backend using Supabase SQL database and TypeScript for data management and logic.
- Implemented a job board feature to enable users to search and apply for jobs.
- Developed an e-commerce shop feature for purchasing HR-related materials, with a secure payment integration using Paystack.

<https://www.michconsultingservices.com/>

- Developed the frontend using React.js and Bootstrap for a responsive, user-friendly interface.
- Built a product view and selection page to allow users to browse and choose products efficiently.
- Created a blog page to provide users with valuable insights and enhance the website's content offering.

Projects

Rebalancr

Architected a protocol for intelligent portfolio management, integrating Allora AI for real-time sentiment analysis and price predictions and Kuru DEX orderbooks to achieve 80% lower slippage compared to AMM-based protocols.

<https://rebalancr.nu.vercel.app>

Blonks

Built a fully on-chain SVG generative art engine where NFTs evolve every 100 blocks based on deterministic wallet-seed logic, Implementing portrait generation and evolution mechanics in Solidity, with real-time tracking in a Next.js frontend.

<https://blonks.vercel.app/gallery>

Kairos

Developed an automated DCA trading bot leveraging MetaMask Advanced Permissions (ERC-7715/7710) for non-custodial, session-based trading powered by real-time market analysis engine using Envio HyperIndex to track Uniswap V4 liquidity and price trends.

<https://kairos-frontend-weld.vercel.app>

Covus

Implemented an ERC-4626 compliant liquid staking protocol for STT tokens with non-rebasing share mechanics, using a robust FIFO withdrawal queue system to maintain protocol solvency and handle orderly redemptions during low-liquidity periods.

<https://covus-beige.vercel.app>

Farcaster Starter Kit

Built an open-source foundational toolkit for developing Farcaster Mini-Apps with built-in JFS (JSON Farcaster Signature) verification, Pre-configured Frame metadata, account association, and notification systems using Scaffold-ETH 2.
